Data Loss Prevention

# DLP SDK

Enabling Content Inspection for  
Enterprise Security Software

## Add content inspection to your product :

- Content Inspection – Real time data classification
- Data Loss Prevention
- Compliance
- Discovery
  
- Standard implementation – 6 weeks / 200 person-hours
- The SDK is used internally in GTB Endpoint Protector

## Full Strength of the GTB Inspector technology:

- Unstructured Data Detection (Fingerprinting Engine)
- Structured Data Detection (Fingerprinting Engine)
- Pattern Data
- Keywords, Dictionaries and Boolean Expressions
- Resilience to data changes and manipulation
- Zero false positives with the fingerprinting engines
- Support for virtually all file formats

## SDK Features

- Scanned based on centrally defined policies
- Report results in a centrally managed database, based on pre-defined policies
- Demo/Test Panel is available
- Scan data in files, in memory, in streams or data in use

## System Requirements:

- The SDK contains: a run time DLLs, C/C++/C# header files, source code samples, sample application and the documentation
- Run time requirements: 32MB of RAM, 80 MB of HDD space
- Works with Windows XP, Vista, 2000 Server, 2003 Server, 2008 Server
- Other platforms are available with a separate contract
